

Leicestershire Fungi Study Group

CHECKLIST OF FUNGI IN
LEICESTERSHIRE AND RUTLAND

(Vice-County 55)

compiled by Tom Hering

August 2015

This checklist is the successor to two previous ones, issued in 1995 and 2008. It is required because a considerable number of species have been added since the last list. It also incorporates some species not recorded by our group, but recorded for the vice-county in the British Mycological Society Foray Records database (BMSFRD).

The entries are in a systematic order, following the classification in BMSFRD. Scientific names are underlined where they are supported by a preserved specimen, or an expert identification. Where there are less than 25 records, a date and location are given. This refers to the most recent specimen, if there is one; otherwise, the most recent record. A number following the name indicates the number of records, if ten or less. For more abundant species, letter-codes are used:- (D) = 11-25 records; (C) = 26-50; (B) = 51-100; (A) = over 100. A second scientific name in brackets is a well-known synonym that has been superseded. There is an Index to Genera on pp. 53-59.
