Displays & Buzzcasts

In addition to the formal speakers and displays, this year there will also be some "Buzzcasts". These short, engaging and informal presentations will take place during the breaks, on a range of interesting beekeeping related subjects.

Speakers

Flemming Vejsnas - Biologist, lifelong beekeeper, employed as adviser for the Danish Beekeepers Association since 1991. Main focus is how to support beekeepers in all aspects, but mainly bee diseases and varroa treatment. Member of the international beekeeping network COLOSS, having focus on the bee losses over the recent years. Over the years been traveling to all continents with honeybees to explore and learn about beekeeping of other countries.

Dr Kirsty Stainton is the Senior Scientist in Bee Health at Fera. Kirsty has worked as an Insect Research Scientist since completing her Ph.D. in 2008 at Oxford University. Her background includes cellular and molecular biology, virology and novel techniques for insect control. Kirsty's previous work includes creating transgenic technologies for SIT programs against agricultural pests. Kirsty's current work involves research into antivirals against the bee viruses DWV and CBPV.

Phil James has worked at Newcastle University for over 20 years at the interface between engineering and computer science. His expertise is in data management and spatial analysis. He carries out research in diverse areas such as water quality, landslide risk assessment and shale gas extraction. He leads the multi-million pound Newcastle Urban Observatory programme and the UK's national observatories programme.

Ian Jobson is a local, recently qualified master beekeeper, who keeps bees in rural Northumberland. He will share his experiences of going through the BBKA module exam and practical assessment programme, during the past four years, focusing on some of the recent research and training that has fuelled his passion for beekeeping.
