

Perseus: The Hero and Algol

Perseus has the famous “Winking Demon Star” Algol, forming his left knee. The star is a variable and this is an interesting project for anyone who wants to follow its changing magnitude. There is no equipment needed just view the star regularly and watch for variations in magnitude at the times given. Algol will dim for a couple of hours before steadily rising to its normal magnitude.

Dates and times of Minima. January and February 2016.

January 10th 00:20. January 12th 21:09. January 15th 17:59. January 30th 02:09.
